

CareSoft Pro® Tannin Filter

Efficiently filters discolored water.

CareSoft Pro® tannin filtration systems are designed to effectively treat discolored water which can be found in well water sources.

A tannin system can provide the quality water you want without all the unwanted minerals, discoloration, odors, tastes or acidity. These filters are manufactured to use water efficiently to conserve your water supply and preserve your well and its components.

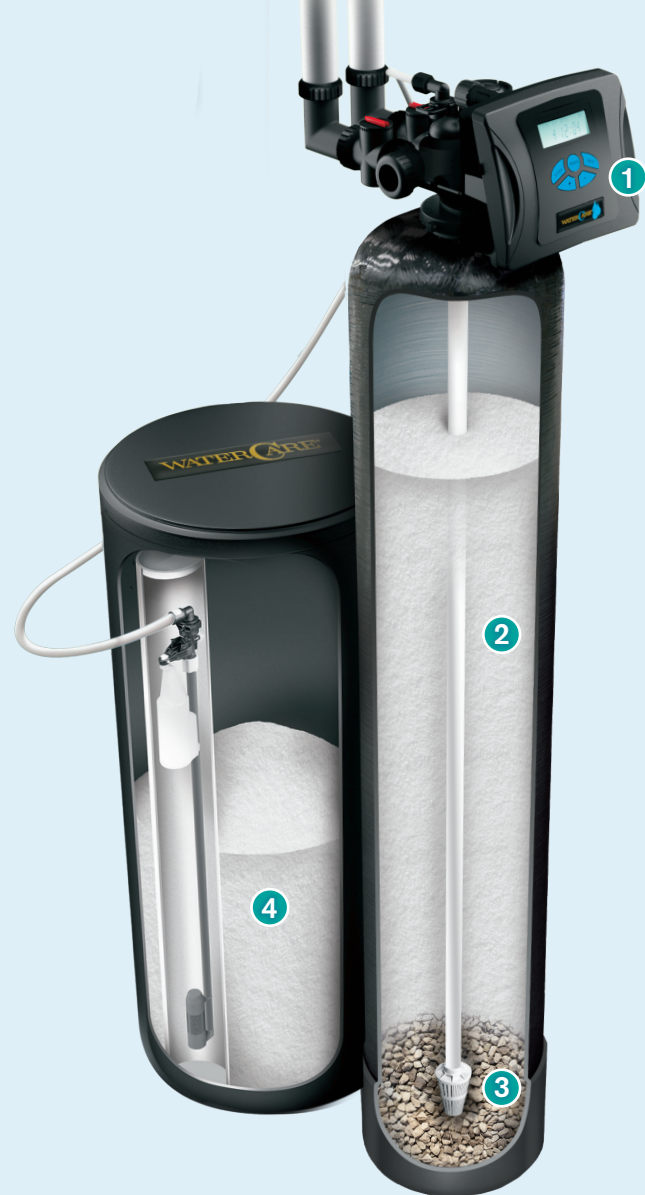

Your water is unique, so choose a filtration system that is tailor-made for your water. You can be confident that a CareSoft Pro tannin unit will clear up your water once and for all.

What are tannins?

Tannins are decomposed organic matter that give water "color," often caused by vegetation. Plants, bark, and even roots in the ground can change your water to a light yellow or tea color. In fact, the coffee and tea you drink every day are considered tannins.

Naturally, tannins are typically found in groundwater wells and can contribute to a musty, "earthy" smell and taste in your water.

CareSoft Pro tannin filters are proven successful in effectively removing any tannins commonly found in well water. Prevent staining of your laundry and create crisp, clean water with one efficient system.

An easy, effective clear water solution.

Every component, feature, and innovation of our CareClear Pro water treatment systems has been designed to efficiently bring water to you and your family. CareClear Pro tannin units can filter your home's water with little to no effort.

- ① **Exclusive Technology**
 - Exclusive features insure consistent water quality
 - Only one internal moving part for easy maintenance
 - Battery back-up
- ② **Unique Adsorption Media**
 - Resin collects tannins to remove from water
 - Durable and long lasting media
 - Capable of mixing with Crystal-Right for pH balancing (see below)
- ③ **Quartz Underbedding**
 - Delivers high and consistent flow rates
 - Provides accurate and efficient cleaning process
- ④ **Low-Maintenance Brine Tank**
 - Built-in safety float
 - Heavyweight, corrosion-free material
 - Dry salt storage
 - Less cleaning

Water treatment to complete your lifestyle.

We may recommend a mixture of medias, depending on your unique water conditions. These options customize your filtration system to match your needs and enhance performance.

Tannin Adsorption Resin

- Reduces organic acids from underground sources that discolor your water
- Performs anion exchange to remove tannins
- System regenerates efficiently to protect well components
- Lowers pH level* during exchange process

Tannin Resin with CR-100

- Tannin resin performs anion exchange to remove tannins
- Tannin resin can lower pH level* during exchange process
- Crystal-Right™ CR-100 media raises pH levels to balance the tannin resin performance
- System regenerates efficiently to protect well components

*Low pH levels can cause corrosion to your home's plumbing and fixtures.
