${ }^{1}$ All Evolve water conditioners are pre-factory set at medium salting.
NOTE: Influent waters must be at least 3 GPG hardness and 80 TDS. A calcite or corosex unit may be needed for correct operation.
${ }^{2}$ Combined iron and manganese removal varies depending on the form of iron, manganese, pH and other local conditions. On waters that are prechlorinated or where other pre-oxidation occurs, precipitated metal oxides may form that are too fine to be filtered.
${ }^{3}$ The pH listed is the minimum for the influent water.
${ }^{4}$ Optimum pH adjustment occurs at 3.0 gpm or less at maximum salt settings. Higher flow rates will produce less pH adjusted water
${ }^{5}$ Unit not tested for capacity at these flow rates. Water quality may vary
